Learning and Caring for the Future

INFORMATION TECHNOLOGY

Revised January 2016

Introduction

Information technology knowledge, skills and understanding are an important aspect of a student's education. Appropriate incorporation of information technologies into teaching and learning can result in significant learning improvements for all students across the curriculum.

Aims

- To provide and efficiently organise a comprehensive range of information technologies to carry out and support curriculum programs.
- To give the students the experience of working with information technology as an integral part of their learning.
- To give the students some understanding of the role of information technology in our society and of the possible future impact on their lives.
- To give students the necessary skills to work with information technology.
- To provide teachers with the means to implement up to date teaching methods and undertake professional development in information technologies.

Implementation

The Information Technology Coordinator will be in charge of resources and materials.

The Information Technology Coordinator will lead a committee to develop a cyclic Information Technology Strategic Plan (see plan).

Information technology will be integrated into the curriculum.

Information technology will be incorporated into all year level programs.
